DETAILED ACTION

This is a response to the Applicant's Request for Continued Examination (RCE) filed on 03/01/2006. In virtue of this Request, claims 1-12 remain pending in the instant application.

Request for Continued Examination entered

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 03/01/2006 has been entered.

Information Disclosure Statement

2. The information disclosure statement (IDS) submitted on 03/01/2006 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

3. Applicant is noted that no copy of the non-patent literature document, which is listed as "Copy of European Search Report dated January 3, 2006", was submitted, and therefore, it is not considered.

Allowable Subject Matter

4. Claims 1-12 are allowed.

Reasons for Allowance

5. The following is an examiner's statement of reasons for allowance:
Prior art fails to disclose or fairly suggest:

- A waveform generator comprising a second semiconductor switch responsive to said level shifted periodic input correction signal and to said periodic switch control signal for generating a periodic output dynamic correction signal having a frequency related to a deflection frequency and a waveform portion, controlled by an operation of said second semiconductor switch, said waveform portion occurring, during a corresponding portion of a period of said output dynamic correction signal, said dynamic correction signal being coupled to a cathode ray tube to vary a field in a beam path of an electron beam of said cathode ray tube for providing dynamic correction, in combination with the remaining claimed limitations as called for in independent claim 1 (claims 2-9 are allowed since they are dependent on claim 1);
- A waveform generator for providing dynamic correction comprising a second semiconductor switch responsive to a signal at a second reference level and to said periodic switch control signal for periodically clamping said signal developed at said second terminal, in accordance with said second reference level, said signal developed at said second terminal being coupled to a cathode ray tube to vary a field in a beam path of an electron beam of said cathode ray tube for providing dynamic correction, in combination with the remaining claimed limitations as called for in independent claim 10 (claim 11 is allowed since it is dependent on claim 10); and
- A waveform generator comprising a second semiconductor switch responsive to said periodic switch control signal and to said level shifted input correction signal and coupled to said output of said amplifier that isolates said second semiconductor switch from said capacitor for generating a periodic output dynamic correction signal

having a first portion, during a first portion of a period of said input correction signal , that is controlled in accordance with said periodic input correction signal, and a second portion, during a second portion of said period of said input correction signal, that is controlled, in accordance with an operation of said second semiconductor switch, said dynamic correction signal being coupled to a cathode ray tube to vary a field in a beam path of an electron beam of said cathode ray tube for providing dynamic correction, in combination with the remaining claimed limitations as called for in independent claim 12.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of relevant prior art

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Prior art George (U.S. Patent No. 6,300,731 B1) discloses a dynamic focus voltage amplitude controller; and

Prior art Fernsler et al. (U.S. Patent No. 6,690,124 B2) discloses a dynamic focus amplifier output with a transformer.
